

Irrigation System Contribution to Recharge Potential: Contribution of irrigation conveyance system components to the recharge potential in Rechna Doab under lined and unlined options

The canal irrigation system in the Indus Basin is facing a number of operational problems resulting in very high degree of losses of water during conveyance as well as during the application of irrigation to crops. These water losses on one hand result in constrained water supplies of canal water but on the other hand provide a source of recharge to the Indus Basin aquifer. Because of increasing scarcity of surface water resources, minimization of recharge through lining is one of the alternatives. Consequently, lining of different components would influence the recharge potential differently. In order to respond to the question of recharge contribution from irrigation conveyance system components, this study was carried out to measure and assess the recharge contribution from canals and distributaries through field investigations and computer simulation techniques, to evaluate the recharge contribution from watercourses and fields (tertiary irrigation system) using field investigation techniques and to compare the contribution of watercourse system to the recharge potential under lined and unlined options.

Revive your spirit. Restore your body. Discover your style.

Home Salon and Spa Services Employment Contact us

Feel free to make a reservation Open Mon -Thu: 9:00am – 6:00pm | Fri – Sat: 9:00am – 7:00pm

Spa Services

We offer an extensive menu of spa services to restore your body and revive your spirit.

Salon Services

From cut, color, styling, texturizing and extensions, we offer a variety of services to fulfill your needs. Discover your style.

Facial Services

Revive your spirit. Restore your body. Discover your style.
