

# The Education of Children

Originally published in 1930, this title looks at the education of children. Adler believes the problems from a psychological point of view are the same as for adults, that of self-knowledge and rational self-direction. However, the difference being that due to the immaturity of children, the question of guidance never wholly absent in the case of adults takes on supreme importance. The title starts by presenting the Individual Psychology viewpoint as a whole, with the later chapters undertaking to tackle in more depth the various interrelated problems of childrens education.
